

Media Genie AI — Full Report

AI Visual Library & Portfolio Builder — reconstructed from the published website

Primary URL

<https://media-genie-ai.vercel.app>

Report date

30 July 2026

Alternate

<https://media-genie-2.vercel.app>

Source basis

Live site, public /api/images, demo gallery (no GitHub source)

Scope note: GitHub source for Media Genie is private / inaccessible to this environment. This report is based entirely on the published product surface and public API.

1. Executive summary

Media Genie AI is an AI-powered visual library and portfolio builder. Users upload images; AI tags, scores, and captions them; then a natural-language prompt produces a **shareable public portfolio URL**.

The live deployment sits on Vercel under Ram Badrinathan’s team and is used in practice for **KarmYog Vatika** project imagery (bamboo, gardens, construction, events). Internally it is catalogued under **vatika.ai / mediagenie.ai**.

Pitch: “Stop organizing photos by hand. Start shipping portfolios in seconds.”

Claimed value: ~3 hours of folder hunting → under 2 minutes to a shareable link.

2. Product identity

Item	Detail
Name	Media Genie AI
Tagline	AI Visual Library & Portfolio Builder
Meta description	AI-powered image management and portfolio generator
Primary URL	https://media-genie-ai.vercel.app
Alternate	https://media-genie-2.vercel.app (same marketing; noted as v2 image management)
Hosting	Vercel — ram-badrinathans-projects
Audience	Photographers, designers, studios, anyone with large image dumps
Org context	KarmYog / Vatika.ai product line

3. User journey (as marketed)

- 1. **Upload** — drag/drop from phone/laptop/camera; up to **20 MB**/image; bulk upload; no separate cloud account required.
- 2. **AI analysis** — Claude Vision claimed; outputs tags, quality score 0–10, caption, dominant colors, scene type.
- 3. **Prompt** → **portfolio** — e.g. “best project shots for investor pitch”; system selects, orders, captions, returns shareable link.

Landing CTAs: “Try it now” → /review · “See a live portfolio” → demo gallery.

4. Feature set

Feature	Behavior
Auto-tagging & classification	Semantic tags, quality score, caption, suggested folders, dominant colors; taxonomy learns from approvals
Search at scale	Filter by tags, folders, scenes, quality (server-side)
Prompt-driven portfolios	Natural-language prompt → curated gallery + public URL
Review workflow	Approve/reject in bulk; soft delete + ~10s undo; Trash restore; audit trail
Editable metadata	Tags, captions, scores editable; custom folders/scenes inline
Sharing	Public URL; Copy / WhatsApp / Email / QR; recipients need no account

5. Site map (observed)

Route	Access	Role
/	Public	Marketing landing
/gallery/[uuid]	Public	Shareable portfolio viewer
/review	PIN gate	Admin review
/portfolio	PIN gate	Portfolio builder (admin)
/settings	PIN gate	Settings (admin)
/api/images	Public JSON	Image library listing

Demo gallery: /gallery/e17f8010-1baa-4f2c-8464-f9fa544bdcd0

6. Demo portfolio (live)

Field	Value
Brand	KarmYog Vatika · Portfolio
Title	Premium Garden Solutions for Goa Properties - Investment Portfolio
Prompt framing	"Premium biophilic garden design for luxury Goa properties"
Count	8 selected works
Share actions	Copy link, WhatsApp, Email, QR
Viewer model	"Prepared for · shared viewer" — no sign-in
Footer CTA	"Reach out — we'll pick up from here" / Contact us

Gallery work labels include: post production image, exterior views, garden installations, planters, events, client sites — each with long, sales-oriented captions. Landing also demos a mock "investor pitch" curation (18 images, score 9.2/10).

7. Inferred tech stack

Layer	Evidence
App / hosting	Next.js App Router on Vercel (Turbopack chunks)
Fonts	Instrument Serif, Inter, JetBrains Mono
Auth	Admin PIN (not public OAuth)
Storage / CDN	Supabase Storage — pbzokljflnqovcojdhks.supabase.co (thumbnails bucket; 400/800 sizes)
Vision AI	Marketing claims Claude Vision
Data API	GET /api/images → JSON array
Possible Drive import	Schema field drive_file_id (unused in public sample)

8. Data model (from /api/images)

Public sample: **100** records, all status: "approved", reviewed_by: "admin".

Fields

id, drive_file_id, filename, filepath, uploader, uploaded_at, processed_at, width, height, mime, exif, file_size, quality_score, tags[], scene, dominant_colors[], orientation, ai_caption, classified_folder, status, reviewed_by, reviewed_at, thumbnail_url, cdn_url, created_at, deleted_at, deleted_by

Design signals

- Soft delete: deleted_at / deleted_by
- Human review: status + reviewed_by / reviewed_at
- Drive pipeline stub: drive_file_id

- AI enrich: tags, scene, colors, caption, quality, folder

Library snapshot (100 images)

Dimension	Observation
Upload window	2026-04-23 → 2026-05-08
MIME	all image/jpeg
Avg quality	~7.5 (range 6–9)
Orientation	landscape 73 · square 17 · portrait 10
Avg file size	~1.2 MB
Top folders	post-production-image (28), 3d-renders (26), karigars (10), team-photos (8)
Top scenes	event-venue, construction-site, sustainable-low-cost-housing, exhibition
Top tags	bamboo, structure, exterior, garden, planter, installation, 3d-render

Content domain: **KarmYog Vatika** — bamboo structures, gardens, construction, events, team/karigar photos, project numbers.

9. Core flows (reconstructed)

Upload → AI enrich (tags / score / caption / colors / scene / folder)
→ Admin review (PIN) – approve / edit / soft-delete
→ Prompt portfolio generation
→ Public /gallery/{uuid} share link

10. Organizational placement

- Category lineage: **mediagenie.ai** → grouped under **KarmYog / Vatika.ai**
- Live links titled Media Genie AI and Media Genie 2 in OmniDEL livelinks catalog
- Cross-ref in Arjun Acharya sales content: portfolios / collateral via Media Genie for Vatika client meetings

11. Gaps (need repo or admin PIN)

- Source code, README, env vars, exact model/prompt config
- Portfolio generation API internals
- Full DB (portfolios, taxonomy, audit tables)
- Upload / Drive sync implementation
- PIN auth mechanism
- Whether /api/images is intentionally public or an exposure

12. Bottom line

Media Genie is a **production-looking Vatika visual ops tool**: Claude Vision enrichment + review queue + prompt-to-portfolio sharing, backed by **Next.js + Vercel + Supabase**, with a live KarmYog Vatika investor-

style gallery on the public site.
